# Rebel Backup – Encrypted Backups to Dropbox and Google Drive

Rebel Backup lets you make encrypted backups of your important files offsite to Dropbox or Google Drive. You control what and how often is backed up, and the encryption happens locally on your computer.

## Rebel Backup Features

### Local Encryption

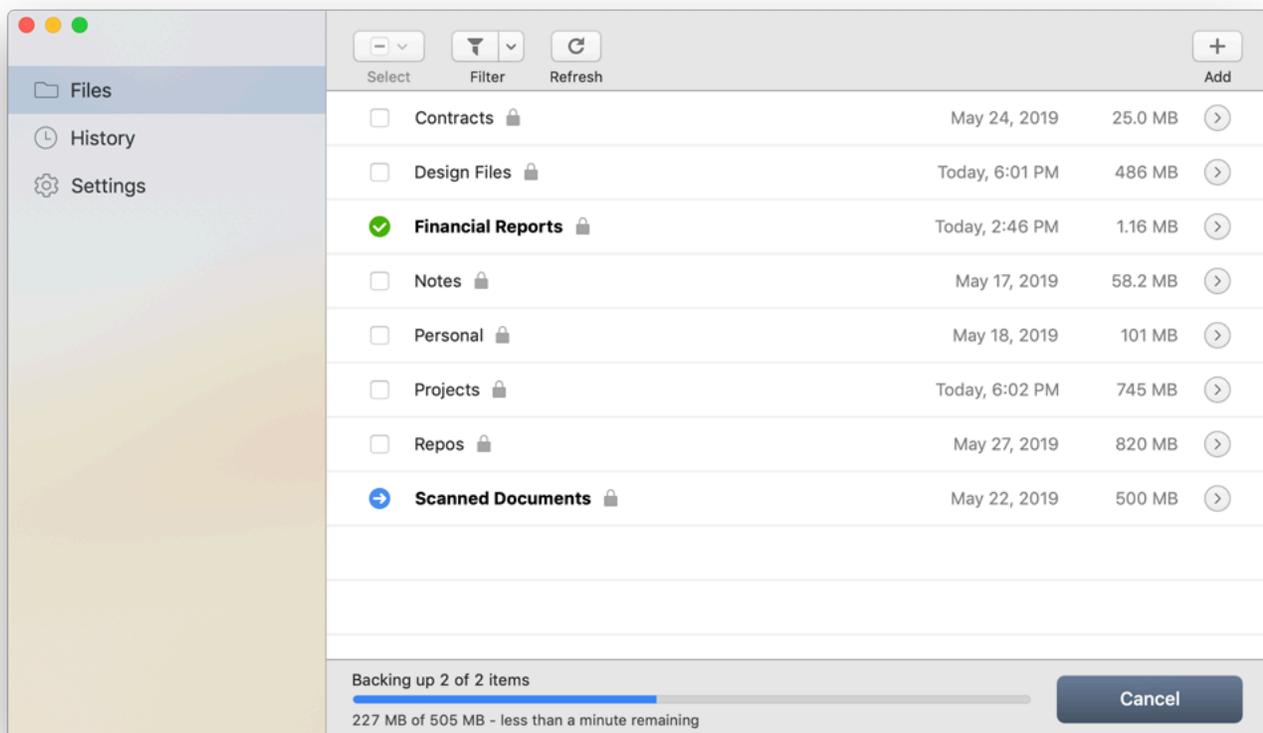

All encryption happens locally on your computer with a secret key that only you have access to.

### Modern Cryptography

Rebel Backup uses a modern cryptographic construction that places no practical limits on the size of files being encrypted, and ensures that an encrypted backup has not been tampered with.

### Streamlined interface

Quickly select the items you'd like to back up, and start the backup with a click of button. Conveniently extract existing backups and remove old ones. Back up as many files and folders as you need, and as often as you need.
